Statement of reasons for allowance

Claims 1,2 have been allowed.

Although dedicated readout circuits may be integral part of the fig.11 circuit in PG-PUB document 20060027730 and US Patent 6175383, the inventions in the respective documents fail short of including all the elements in the claimed invention such as charge accumulating substrate are that comprises a pixel area. Moreover, the claimed invention seems to have priority advantage over the two other cases.

The prior arts do not teach or render obvious the claimed method of acquiring an image, having a plurality of pixel areas, each said pixel area covering a specific optical area of a charge accumulating substrate, providing a photogate controlling a characteristic of said charge accumulating substrate and providing a sensing node which senses charge in said sensing charge accumulating substrate; and associating a readout circuit with each of said sensing nodes of each of said pixel areas, in a way that each said pixel area includes a dedicated readout circuit.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Refer to PN: 6175383.
